SUNWARD

Azize Equipment (Pty) Ltd holds sole distribution rights from Sunward Intelligent Equipment Company as the South African distributor and servicing agent of Sunward drill rigs, excavation and earthmoving equipment, to industries across South Africa.

Established by a professional team with a thorough understanding of the technical and commercial aspects of owning, operating and maintaining all types of drill rigs and earth-moving equipment, Azize aspires to bring a new level of responsive, flexible and customer-orientated service to the market, with full sales and service facilities established in Carolina, the heart of the coal mining industry.

Apart from a “we have it in stock” philosophy to support the installed base of Sunward products, a full hands-on accredited training centre has been developed - allowing operators to train on their own machines prior to delivery. A demo drill rig is also available for training purposes.

Azize also offers solutions for dewatering , mobile lighting, compressed air, and protection of valuable capital equipment against engine and hydraulic compartment fires.

Combined with their hands-on approach, our team ensures that clients receive the most appropriate and cost-effective solution for their needs, professional advice, prompt service and strong technical support to ensure the highest level of up-time at all times. We put our customers FIRST.

SUNWARD

DTH SURFACE DRILLS

Crawler Drill Rigs

SWD series down-the-hole drills are widely used in blasthole drilling applications for surface mining, construction and quarries.

Hole diameters range from 138mm to 255mm and hole depths up to 36m providing precise and efficient drilling. The load adaptation system ensures power matching of power to the load, which effectively reduces the energy consumption of the machine, while ensuring optimal performance and high reliability.

Excavator Drill Rigs

The Sunward SWDR 138 Excavator Drill Rig is the only OEM approved excavator drill rig available for blast hole drilling in surface mining, construction, and quarries. With hole diameters ranging from 105mm to 165mm and hole depths up to 36m, the SWDR 138 is the most versatile and flexible drilling rig available in the market.

Hydraulic Drill Rigs

SWDH Top Hammer Drill Rigs

SWDH hydraulic drill rigs are designed for the operating conditions of small-medium size quarries and small open pit mines. The drill hole diameter ranges from $\Phi 64$ to $\Phi 127$ mm and the maximum hole depth is 20m. They can be used in quarry, civil engineering, road engineering, open pit mines, as well as rock blasting and blast hole drilling operations. They are used mainly for drilling hard and above medium hard rocks and have strong climbing ability and flexibility. These drill rigs are ideal for carrying out drilling operations in tough and complex terrains, and offer a high drilling rate with low energy consumption.

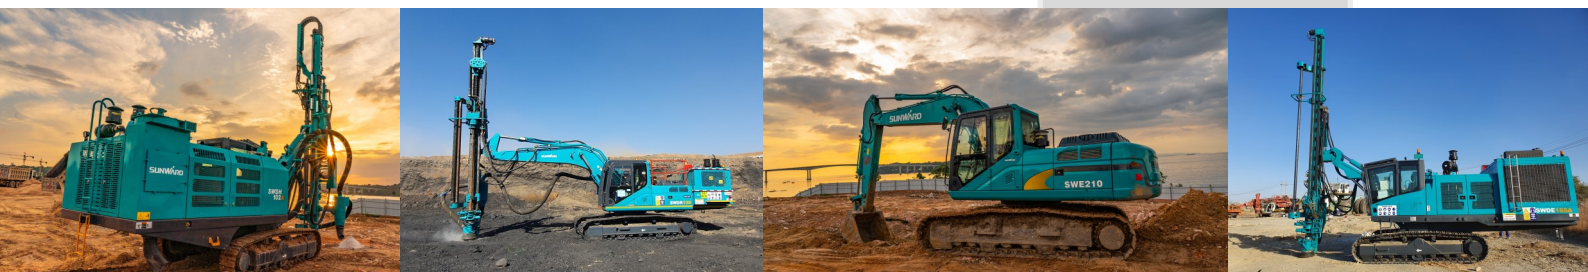

EXCAVATORS

Sunward's comprehensive range of Mini, Small, Medium and Large excavators from 1-90 tonnes offer reliable and efficient performance in mining and construction applications.

Sunward large excavators are designed to endure rough conditions and boast reliability, high efficiency, energy saving and comfort. This machine has a proven hydraulic system, a strong rotation mechanism, and a powerful traction system.

With a user-friendly machine monitoring system which has a wide viewing angle, high definition and featuring all-round visibility, this machine can be used to carry out heavy-duty tasks in construction and mining! By virtue of their superior performance, reliability and quality, these large excavators are worthy of the title "Powerful mining equipment"!

DE-WATERING PUMPS

Our Grindex dewatering pump product range, which includes submersible slurry pumps, drainage pumps, sludge pumps, portable pumps, sewage pumps, large drainage pumps, mixers and aerators, as well as a range of self-priming diesel pumps, means that our pumps can be used for diverse applications across a number of industries.

LIGHTING TOWERS

The science of mobile lighting has sat at the heart of the ALLIGHT brand for more than 20 years.

Powered by a Perkins 2 cylinder engine, our **ALLIGHTSYKES** tower features the world's most reliable components as well as a unique mast design and light assembly which ensures that the maximum output reaches your work platform for

AIR COMPRESSORS

Compressor engineering is not just about delivering air. It's about assuring uptime for mission critical applications.

Our **ELGi** range of compressed air solutions includes oil-lubricated and oil-free rotary screw compressors, high pressure diesel-driven compressors, centrifugal compressors, portable compressors, dryers, filters and downstream accessories.

FIRE SUPPRESSION SYSTEMS

FOGMAKER is a high pressure water mist fire suppression system for vehicles and machines with enclosed engine compartments.

A fire in a mine or forest can have devastating consequences in the form of injury, loss of life and production reductions with high economic loss.

In the compact and hot engine compartment of a yellow metal machine the propagation of fire can be very fast, and if not detected early and sufficiently suppressed, will lead to a total asset loss.

AZIZE

SERVICE, REPAIR, MAINTENANCE & SPARE PARTS

Our dedicated service team offers comprehensive support on all our products and we are committed to providing our customers with :-

- **TECHNICAL ADVICE AND TROUBLESHOOTING**
- **GENUINE SPARE PARTS**
- **HEALTH CHECKS**
- **SLA CONTRACTS**
- **REPAIRS AND OVERHAULS**

We can provide our customers with planned maintenance services of our products, health checks and genuine spare parts - ensuring optimal operation through regular and pro-active inspections and maintenance.

Whether on-site or in our service centre, our service professionals are always available, ensuring fast, efficient and reliable provision of original spare parts and quality service at short notice.
